- Speed improvements

Version 1.2

- Better skin / value displays
- No denormal behaviour, should also work on every Pentium 4
- Auto default bank loader (vcs-reducer-default.fxb)
- up to 50% speed increase

Version 1.0

Initial version

Description

VCS Elite Reducer is a sample rate / bit rate vst reducer with two resonatable low pass filters and a special logical values combination algorithm. It performs very good (takes 1%-2% processor usage on an Amd K7 1000 Mhz computer system). It features an automatic bank loader and an handy GUI which makes it easy to automate the reducer's values.

Area of application

Elite Reducer is very useful to for adding a powerful distorted sound to beat constructions. It sounds also very good on acid basses and atmospheric sounds. Strange computer lofi effects and lofi arpeggiator sounds can be created with reducer easily. Reducer as group master effect can be used for a rate sweep. There are also a lot of other areas of application for Elite Reducer.
